

CATALOG

High voltage engineered induction motors

Technical catalog

- Engineered induction motors are highly customized, fine-tuned to the customer's precise needs, and offer a high degree of engineering flexibility

—
**We provide motors and generators,
services and expertise to save
energy and improve customers'
processes over the total life cycle
of our products, and beyond.**

Table of contents

004	High voltage engineered induction motors
006	Rotor and stator
007 – 010	High voltage terminal boxes
011	Auxiliary terminal boxes
012 – 016	Bearings
017 – 018	Vibration
019 – 052	Rib cooled motors, type AXR
054 – 122	Modular induction motors, type AMI
124 – 136	Rib cooled motors, type HXR
138 – 154	Modular slip-ring motors, type NMK
156	Total product offering
157	Life cycle services and support

ABB reserves the right to change the designs, technical specifications and dimensions without prior notice.

This catalog presents preliminary standard technical data and drawings of engineered induction motors. Data presented in rating lists are typical values. All engineered motors are configured and optimized according to the customer specifications. Accurate motor data will be given on request at the quotation phase.

All ratings in this catalog are designed for the following:

- Class F insulation / Maximum temperature rise of 80 °C by resistance
- 40 °C ambient
- Altitude of 1000 meters or less

High voltage engineered induction motors

Efficiency and reliability for all applications

Engineered induction motors from ABB are highly customized, fine-tuned to the customer's precise needs, and offer a high degree of engineering flexibility.

This catalog covers ABB's high voltage engineered induction motors: air cooled motors (type AXR and HXR 560), modular induction motors (type AMI), and slip-ring motors (type NMK).

All ABB engineered motors are optimized to match the customer's specifications and application requirements. They can meet the toughest specifications across different market segments like the oil and gas industry.

The motors are backed by ABB's global support network, which includes over 60 service centers and more than 150 authorized service providers worldwide. The availability of round-the-clock access to spares, repairs and replacements, as well as predefined maintenance programs for all stages of the product life cycle, helps customers to minimize downtime and reduce their cost of ownership.

Available output power, voltage range and pole numbers

AXR, output at 50 Hz and 60 Hz

Poles	Output (kW) at 50 Hz			Output (kW) at 60 Hz	
	AXR			AXR	
	3 kV	6 kV	10 kV	4.16 kV	6.6 kV
2	125 - 1550	160 - 1500	355 - 1320	160 - 1600	160 - 1580
4	125 - 1750	160 - 1700	355 - 1400	160 - 1800	160 - 1750
6	125 - 1570	140 - 1500	250 - 1175	125 - 1700	160 - 1650
8	200 - 1280	180 - 1200	400 - 900	160 - 1300	160 - 1300
10	160 - 1030	160 - 970	–	160 - 1150	160 - 1120
12	140 - 740	140 - 680	–	140 - 775	200 - 740

HXR 560, output at 50 Hz

Poles	Output (kW) at 50 Hz		
	HXR		
	3 kV	6 kV	10 kV
2	1550 - 1730	1500 - 1600	–
4	1750 - 2240	1700 - 2000	–
6	1570 - 2000	1500 - 1800	1175 - 1400
8	1280 - 1600	1200 - 1500	900 - 1120
10	1030 - 1350	970 - 1230	–
12	740 - 1100	680 - 980	–

Output ranges of ABB motors (Temperature rise class B, insulation class F). Other voltages on request.

AMI, output at 50 Hz

Poles	Output (kW) at 50 Hz		
	AMI		
	3 kV	6 kV	10 kV
2	630 - 8000	630 - 8000	630 - 7100
4	630 - 8000	630 - 7800	800 - 6700
6	450 - 6500	450 - 6500	560 - 5600
8	280 - 4800	280 - 4500	630 - 4150
10	250 - 3700	200 - 3700	530 - 3000
12	160 - 3000	180 - 2800	355 - 2300

Output ranges of ABB motors (Temperature rise class B, insulation class F). Other voltages on request.

NMK, output at 50 Hz

Poles	Output (kW) at 50 Hz		
	NMK		
	3 kV	6 kV	10 kV
4	10000	10000	9000
6	8500	8500	8000
8	6300	6300	5600
10	4500	4500	4000
12	3550	3550	3150
14	2800	2800	2500
16	2240	2240	2000

Output ranges of ABB motors (Temperature rise class B, insulation class F). Other voltages on request.

Rotor and stator

Rotor

The key to a long rotor operating life is minimal vibration. This is achieved through robust construction and careful balancing. ABB selects the shaft material according to the demands of the application and the ambient conditions in which the motor is to operate.

Squirrel cages are made of copper, copper alloy or aluminum, depending on the load and customer requirements. Additional stiffness is provided by fabricated rotor bars, which enable the motors to withstand long periods of heavy use. Aluminum bars and end rings are used to ensure optimal starting characteristics.

Wound rotors of slip ring motors are made of materials that can withstand heavy conditions ensuring low vibration levels through a solid structure and the perfect balancing of each component. The wound rotor is VPI impregnated same as stators with ABB's Micadur® Compact Industry insulation system. ABB special rotary VPI curing process for wound rotors minimize vibrations and ensure a lifelong stability; rigid bandages with patented structure also prevent windings from being exposed to distorting centrifugal forces.

Once assembled each rotor is dynamically balanced at full operating speed in accordance with the ISO 1940-1 and ISO 11342 standards on mechanical vibration.

Stator

The stator core is welded and machined to form a solid and compact unit that retains its rigidity throughout the life of the motor. Radial air ducts ensure uniform and efficient cooling.

When completely wound and connected, the stator is vacuum pressure impregnated and cured with ABB's Micadur® Compact Industry insulation system, a specially formulated epoxy resin used by ABB to insulate all its rotating electrical machines over the past 30 years. Micadur ensures a sealed and homogeneous insulation system, resulting in low dielectric losses, high dielectric strength, excellent heat transfer and the elimination of hazardous internal partial discharges.

As standard, all motors are designed to stay within temperature class F.

High voltage terminal boxes

Technical data:

Voltage (max.)	6.6 kV
Current (max.)	400 A
Dynamic short circuit current	75 kA (0.25 s)
No of cables (max.)	1 per phase
Cross section of cables (max.)	300 mm ² /cable
Cable gland	Blind gland (1 pce)
Clearance (min.)	60 mm
Creepage (min.)	89 mm
Gross volume	44 dm ³
Usable volume	39 dm ³
Connection screws	M16 (3 pcs)
Connection nuts	Tightening torque 40 Nm
Ground connections	M12 (both in- and outside)
Weight	33 kg
Protection	IP66
Standard	DIN 42962 TEIL 1, A2

Materials:

Box	Welded sheet steel (thickness min. 3 mm)
Cable gland plate	Steel
Connection screws	Bronze
Isolators	Epoxy casting resin or polyurethane resin
Grounding pad	Stainless steel

Other features:

- Rigid welded construction
- Ample size for making connections of supply cables
- Box turnable to allow cable entry from left or right
- Box turnable in steps of 90°
- Either 3-phase or 1-phase cables can be connected
- Pressure relief plate in the bottom of box in case of arching short circuit
- Different cable glands available
- Terminal box tested acc. to IEC 298 concerning internal arc strength

01 High voltage terminal box. Dimensions in mm.

High voltage terminal boxes

Technical data:

Voltage (max.)	6.6 kV
Current (max.)	800 A
No. of cables (max.)	2 per phase
Cross section of cables (max.)	300 mm ² /cable
Cable gland	Blind gland (1 pce)
Clearance (min.)	60 mm
Creepage (min.)	89 mm
Gross volume	197 dm ³
Usable volume	189 dm ³
Connection screws	(M16x1/M12x2/ M10x2)/phase
Tightening torque for connection nuts	190 Nm (M16), 55 Nm (M12), 46 Nm (M10)
Ground connections	M12 (both in- and outside)
Weight	90 kg
Protection	IP66
Standards	DIN 42962 Teil 2, D2 (internal dimensions)

Materials:

Box	Welded sheet steel (thickness min. 3 mm)
Cable gland plate	Steel
Connection screws	Bronze
Isolators	Polyurethane resin or epoxy casting resin
Grounding pad	Stainless steel

Other features:

- Rigid welded construction
- Ample size for connecting supply cables
- box turnable to allow cable entry from left or right
- Box turnable in steps of 90°
- Either 3-phase or 1-phase cables can be connected
- Pressure relief plate in bottom of box in case of arcing short circuit
- Different cable glands available

02 High voltage star point terminal box, max 6.6 kV.
Dimensions in mm.

High voltage terminal boxes

Technical data:

Voltage (max.)	11.0 kV
Current (max.)	400 A
No. of cables (max.)	1 per phase
Cross section of cables (max.)	300 mm ² /cable
Cable gland	Blind gland (1 pce)
Clearance (min.)	100 mm
Creepage (min.)	163 mm
Gross volume	127 dm ³
Usable volume	117 dm ³
Connection screws	M16 (3 pcs)
Connection nuts	Tightening torque 40 Nm
Ground connections	M12 (both in- and outside)
Weight	62 kg
Protection	IP66
Standard	DIN 42962 TEIL 2, C2

Materials:

Box	Welded sheet steel (thickness min. 3 mm)
Cable gland plate	Steel
Connection screws	Bronze
Isolators	Epoxy casting resin
Grounding pad	Stainless steel

Other features:

- Rigid welded construction
- Ample size for connecting supply cables
- Box turnable to allow cable entry from left or right
- Box turnable in steps of 90°
- Either 3-phase or 1-phase cables can be connected
- Pressure relief plate in bottom of box in case of arcing short circuit
- Different cable glands available

03 High voltage terminal box, max 11 kV
Dimensions in mm.

High voltage terminal boxes

Dimensions for terminal box inlet, blind flange

As standard, main terminal boxes are supplied with a blind flange.

04 Blind flange FL 33
for terminal box.

Auxiliary terminal boxes

As standard, motors in safe areas are equipped with one common auxiliary terminal box for monitoring devices and space heaters. As standard, motors in hazardous areas are equipped with two auxiliary terminal boxes, one for monitoring devices and one for space heaters.

Standard auxiliary terminal boxes

Type designation	Use	Size (H x D x W) mm
Small terminal box	Standard	125 x 81 x 222
Large terminal box	When additional space needed	230 x 180 x 330

Typical arrangements for standard terminal boxes are shown below. The number of terminal blocks depends on the number of accessories used with the motor. Additional terminals can be supplied on request.

05 Small terminal box with terminal blocks and cable glands.
 1) Cable gland M20x1.5 for cable outer diameter 10 to 14 mm (2 pcs)
 2) Threaded hole for cable gland M16x1.5 (3 pcs), plugged.

06 Large terminal box with terminal blocks and cable glands.
 1) Cable gland M20x1.5 for cable outer diameter 10 to 14 mm (4 pcs)
 2) Threaded hole for cable gland M16x1.5 (3 pcs), plugged.

Bearings

Horizontal motors

Horizontal motors in frame sizes 315 to 500 have deep groove ball bearings at both ends. The HXR 560, AMI 560 to 630 and NMK 560 to 710 frame sizes have a double bearing arrangement (a deep groove ball bearing and cylindrical roller bearing) at the D-end and a cylindrical roller bearing at the N-end (only horizontal motor available).

The bearing at the D-end is axially locked in horizontal motors. Standard bearings for

horizontal motors are listed in the table below and the bearing construction is shown in the figures on page 13.

The standard bearing solution is designed to carry the weight of a typical coupling half and the motor's rotor only. Any additional radial or axial force caused by the driven equipment may require specially constructed bearings.

Standard bearings for horizontal motors

Frame size	Poles	D-end	N-end
AXR 315	≥2	6317M/C3	6317M/C3

Bearings

Rated lifetime

Most standard bearings have a rated lifetime L10h in excess of 100,000 h. The rated lifetime for frame size 500, 2-pole, may be less than 100,000 h. The lifetimes are calculated in accordance with ISO R 281-1.

The basic rated lifetime L10h is the number of hours at rated bearing load and speed that 90% of a group of identical bearings will complete or exceed before the first evidence of failure.

Lubrication intervals

The motors are fitted with grease nipple(s) at both ends for lubricating the bearings. The grease nipples are located on the top of the motor. The amount of grease and the greasing interval are stamped on the relubrication plate, and the same information is shown in the table below.

Relubrication intervals and grease amount for AXR motors

Bearing type	Amount of grease (g)	Lubrication intervals in running hours at different speeds (rpm)									
		3600	3000	1800	1500	1200	1000	900	750	600	≤ 500
6317	35	2200	3000	8000	8800	8800	8800	8800	8800	8800	8800
6319	45	1500 ¹⁾	2500 ¹⁾	6600	8800	8800	8800	8800	8800	8800	8800
6324	75	NA	NA	4400	5900	8000	8800	8800	8800	8800	8800
6330	100	NA	NA	3000	3600	5900	8000	8800	8800	8800	8800

¹⁾ Use synthetic grease only

Relubrication intervals and grease amount for HXR motors

Bearing type	Amount of grease (g)	Lubrication intervals in running hours at different speeds (rpm)					
		3600	3000	1800 - 1500	1200 - 1000	900 - 750	600 - 500
6317	35	800	2200	8800	8800	8800	8800
6319	45	400	1600	6600	8800	8800	8800
6322	60			6600	8800	8800	8800

Note: The lubrication intervals in the table are based for standard lithium soap based greases with the bearing temperature of 70 °C (158 °F).

Note: External load can cause shorter re-lubrication interval or different type grease.

Note: Re-lubrication intervals are defined based on the roller bearings (NU) in order to make to maintenance work simpler (the shortest relubrication interval is valid).

Bearings

Sleeve bearings

As standard, the axial float of the rotor is ± 8 mm from the mechanical center. The running center is located within the float area and therefore operation is also allowed while the motor is uncoupled eg, during test running. As standard, a pointer showing the running center with regard to the end limits is available. Continuous axial forces are not permitted and therefore a limiting type of coupling is needed to ensure the location of the rotor within the axial float range. On request and as an option, when the special axial float is at least ± 3 mm, the magnetic running center can be adjusted to within ± 2.4 mm of the mechanical center.

Sleeve bearings are generally self-cooled, oil ring lubricated but some require external flood lubrication. Please see the lubrication table below for standard lubrication requirements based on a maximum 40°C ambient and 50 Hz operation. Consult ABB for ambient temperatures above 40°C, or for self-cooling of bearings where flood lubrication is standard. Units requiring flood lubrication are supplied with provisions only. Refer the oil supply pressure, type of oil, and location of provisions to the factory for review prior to order acceptance.

Sleeve bearings and lubrication method

Frame size	Poles	D-end bearing	N-end bearing	Lubrication method

Bearings

Vertical motors

Vertical motors in frame sizes 315 to 500 have deep groove ball bearing in D-end and single-row angular contact ball bearing in N-end.

The bearing at the D-end is axially free in vertical motors when an angular contact ball bearing is mounted in N-end. Standard bearings for vertical motors are listed in the table below and the bearing construction is shown in the figure below.

The standard bearing solution is designed to carry the weight of a typical coupling half and the motor's rotor only. Any additional radial or axial force caused by the driven equipment may require specially constructed bearings.

Standard bearings for vertical motors

Frame size	Poles	D-end	N-end
AMI 400	≥ 4	6324/C3	7319 BMP
AMi 450	≥ 4	6326/C3	7322 BMP
AMI 500	≥ 4	6330/C3	7324 BMP
AMI 560	≥ 4	6038/C3	1x7330 BCBM
AMI 630	≥ 6	6044/C3	1x7334 BCBM
AXR 315	≥ 2	6317M/C3	7317 BCBM
AXR 355	2	6317M/C3	7317 BCBM
AXR 355	≥ 4	6319M/C3	7317 BCBM
AXR 400	≥ 4	6324M/C3	7319 BCBM
AXR 450	≥ 4	6030M/C3	7324 BCBM
AXR 500	≥ 4	6030M/C3	7326 BCBM

Standard bearing construction of vertically mounted motor, AXR 315 to 500.

Rated lifetime

The bearing rates for all vertical motors with standard bearings have a rated lifetime L10h in excess of 100,000 h. The lifetimes are calculated in accordance with ISO R 281-1.

The basic rated lifetime L10h is the number of hours at rated bearing load and speed that 90% of a group of identical bearings will complete or exceed before the first evidence of failure.

Additional axial force from the driven equipment is not allowed.

- 14
 1 Inner bearing cover
 2 Deep groove ball bearing
 3 Grease valve
 4 Outer bearing cover
 5 Retaining ring
 6 Waste grease box
 7 Spring
 8 O-ring

Lubrication intervals

The motors are fitted with grease nipple(s) at both ends for lubricating the bearings. The grease nipples are located on the top of the motor. The amount of grease and the greasing interval are stamped on the relubrication plate, and the same information is shown in the table on page 14.

Vibration

Standard design

The standard motors manufactured according to IEC standard satisfy the Grade A vibration limits specified in IEC 60034-14. The maximum accepted values are shown in the table below.

Standard design unfiltered vibration limits

Poles	Speed (rpm)	Bearing housing vibration	Relative shaft vibration	Combined runout
2	1800 < n ≤ 3600	2.3 mm/s rms	65 μm p-p	16 μm p-p
≥ 4	n ≤ 1800	2.3 mm/s rms	90 μm p-p	23 μm p-p

Rib cooled motors, type AXR

More know-how per kilogram

The latest generation of multipurpose rib cooled motors offers high power density, easy configurability and built-in serviceability. They incorporate experience ABB has gained over more than 130 years of manufacturing electric motors.

These motors set a benchmark for the industry, offering more watts per kilogram than has ever been achieved before with rib cooled motors. High power density means that for a given output you can often use a motor one frame size smaller than with conventional products. This helps to save space and enables more compact installations.

AXR motors comply with main industry standards such as API 541 and shell DEP as well as customer specifications.

AXR motors have a rugged cast iron frame. They are rib cooled motors with IC411 cooling and IP55 protection as standard. The motors are also available with IC416 cooling and optional IP66 protection. Their IP66 protection has been verified by a leading independent testing organization.

AXR motors cover the output range up to 1,800 kW, and they are available in shaft heights from 315 to 500 mm. The motors can be mounted horizontally and vertically. For AXR motors this catalog shows the technical data at 50 Hz and 60 Hz, and for synchronous speed from 500 to 3600 rpm.

Rib cooled motors, type AXR

Mounting arrangements

Standard mounting arrangements for AXR motors

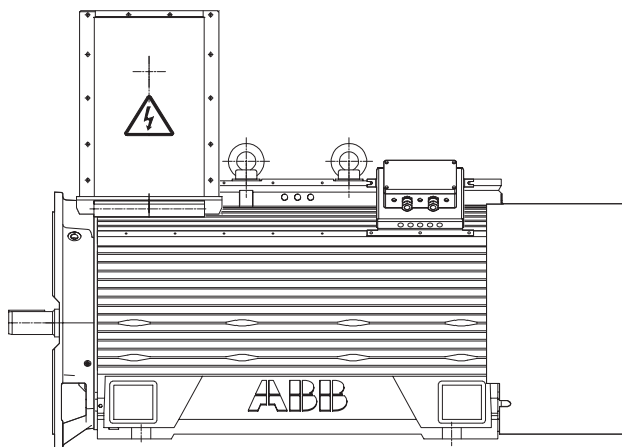

—
15
Code I: IM B3
Code II: IM 1001
Standard floor
mounting, feet
facing downwards
(horizontal foot
mounted).

—
16
Code I: IM V1
Code II: IM 4011
Flange and free shaft
end facing downwards
(vertical solid shaft,
flange mounted).

—
17
Code I: IM B35,
Code II: IM 2001
Foot-and-flange-
mounted horizontal
with the flange part
of the end-shield,
one cylindrical shaft
extension and feet
facing downwards.

Rib cooled motors, type AXR

Enclosure and cooling

Standard combinations

IC411 / IP55

AXR motors have an external shaft mounted fan that uses the surrounding air for cooling. The motors are protected against dust and water jets. The operating principle of these motors is shown in diagram 17 below.

IC416 / IP55

AXR motors are available with IC416 cooling. An additional motor drives the cooling fan to produce the cooling required for low speed applications, especially in cases where the motor is fed via a variable speed drive.

Protection rating IP55

- Protection against dust: as in other dust-protected motors, some dust can enter but not in sufficient quantities to interfere with the motor's operation.
- Protection against water jets: water projected by a nozzle against the motor from any direction has no harmful effect.

Protection rating IP66

AXR motors are available with protection ratings up to IP66.

- Protection against dust: the enclosure is completely dust tight.
- Protection against water jets: water projected in powerful jets (12.5 mm nozzle) against the enclosure from any direction has no harmful effect.

Cooling method (IC411)

- Frame surface cooled: The primary coolant is circulated in a closed circuit in the motor and gives its heat through the external surface of the motor (in addition to the heat transfer via the stator core and other heat conducting parts) to the final coolant which is the surrounding medium. The surface may be plain or ribbed, with or without an outer shell to improve the heat transfer.
- Self circulation: The coolant is moved dependent on the rotational speed of the main motor either by action of the rotor alone or by means of a component designed for this purpose and mounted directly on the rotor of the main motor, or by a fan or pump unit mechanically driven by the rotor or the main motor.

Modular induction motors, type AMI

High reliability and availability

When you want to make your operations more reliable, productive and energy efficient, you can count on ABB's modular induction motors.

AMI engineered modular induction motors provide reliability and availability in the toughest and most demanding applications.

Engineered modular induction motors are tailor-made to meet the needs of each customer and each application. Built from the motor industry's most successful modular platform, they match a broad variety of demanding application requirements while having the flexibility to be adapted to highly specific configurations.

ABB's modular induction motors comply with all relevant international standards. Versions are available for both direct-on-line (DOL) and variable speed drive (VSD) operation.

AMI modular induction motors have a welded steel frame. They are available with the following cooling methods and protection types as standard: IC01/IP24W, IC611/IP55 and IC81W/IP55. The standard shaft heights are 400 to 630 mm. The motors can be mounted horizontally or vertically.

For AMI motors this catalog shows the technical data at 50 Hz only, but these motors are operating at both 50 Hz and 60 Hz, with synchronous speed from 500 to 3600 rpm. Output powers for AMI motors covered in this catalogue are up to 8,000 kW, while the complete range goes up to 23,000 kW.

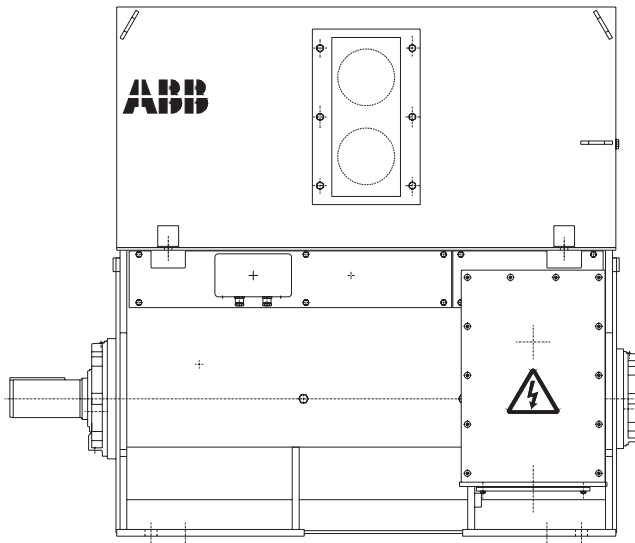

Modular induction motors, type AMI

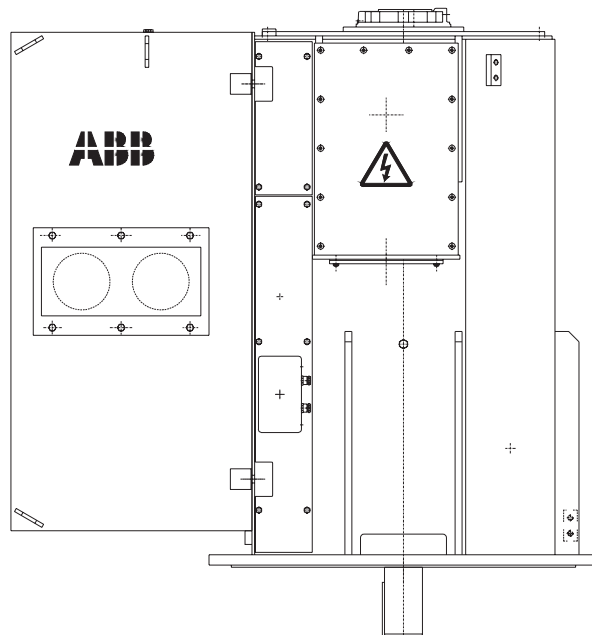

Mounting arrangements

Standard mounting arrangements for AMI motors. Other mountings available on request.

IC01

Standard combinations for AMI motors:

IC01 / IP24

This weather protected motor has a shaft mounted cooling fan inside the housing. The design of the motor reduces the ingress of rain, snow and airborne particles into the electrical parts. On the air intake path this is achieved by ensuring that the average velocity does not exceed 3 m/s, allowing any heavier particles to settle. The design of the air intake path includes three acute direction changes in excess of 90 degrees to further reduce the flow rate to the optimal level. The motor is protected against splashing water from any direction.

IC611 / IP55

This design has an air-to-air heat exchanger mounted on the motor, which is fully enclosed. Shaft mounted fans are fitted both inside and outside of the casing to supply the inside and outside cooling circuits respectively. The motor is protected against dust and splashing water from any direction.

IC81W / IP55

This fully enclosed motor is fitted with an air-to-water heat exchanger. A shaft mounted fan is fitted inside the casing to supply the internal cooling circuit. The motor is protected against dust and splashing water from any direction.

The terminal boxes have a protection rating of at least IP55.

IC31 / IP55

This version is fitted with inlet and outlet pipes to use remote cooling air. Essentially this is the AMI motor frame without an upper cover. The motor is protected against dust and splashing water from any direction.

IC01

IC01 with asymmetric inside air circulation.

Modular induction motors, type AMI

Type designation

The type designation of the AMI motor follows the coding principle shown below.

Example: AMI 450L4A BATH

1	AM	General type designations
2	I	Indicates the type of motor, A, I = SCIM, K, L = WRIM
3	450	Shaft centre height in mm; 355, 400, 450, 500, 560, 630
4	L	Frame length, S = small, M = medium or L = long
5	4	Number of poles
6	A	Stands for the IC/IP combination A = IC611 / IP54 (55) [TEAAC] air-to-air cooled D = IC01 / IP23 [WP I] open ("drip proof") L = IC81W / IP54 (55) [TEWAC] air-to-water cooled P = IC11, 21, 31 / IP23, 54, (55) [OPV, TEPV] pipe ventilated W = IC01 / IPW24 [WP II] weather protected
7	B	Mounting arrangement, B = IM1001 (horizontal), V = IM4011 (vertical)
8	A	Bearing type, A = antifriction, S = sleeve
9	T	Indication of special construction T = separate ventilation M = marine application Y = mechanically special F = frequency converter drive X = electrically special Z = special material specs
10	H	Location of manufacture

Modular induction motors, type AMI

Table gives main dimensions in mm.

Rib cooled motors, type HXR 560

High efficiency and reliability

HXR cast iron motors offer high performance for all applications.

HXR rib cooled motors have a rugged cast iron frame. They are totally enclosed fan cooled motors with IC411 cooling and IP55 protection as standard. The motors are also available with IC416 cooling and optional IP66 protection.

HXR motors cover the output range up to 2,250 kW, and they are available in shaft height 560. The motors can be mounted horizontally or vertically.

For HXR motors this catalog shows the technical data at 50 Hz only, but the motors are operating at both 50 Hz and 60 Hz, with synchronous speed from 500 to 3600 rpm.

Rib cooled motors, type HXR 560

Mounting arrangements

Standard mounting arrangements for HXR motors. Other mountings available on request.

(Vertical solid shaft,
flange mounted)

Rib cooled motors, type HXR 560

Enclosure and cooling

Standard combinations

IC411 / IP55

HXR motors have an external shaft mounted fan that uses the surrounding air for cooling. The motors are protected against dust and water jets. The operating principle of these motors is shown in diagram 27 below.

IC416 / IP55

HXR motors are available with IC416 cooling. An additional motor drives the cooling fan to produce the cooling required for low speed applications, especially in cases where the motor is fed via a variable speed drive.

Protection rating IP55

- Protection against dust: as in other dust-protected motors, some dust can enter but not in sufficient quantities to interfere with the motor's operation.
- Protection against water jets: water projected by a nozzle against the motor from any direction has no harmful effect.

Protection rating IP66

HXR motors are available with protection ratings up to IP66.

- Protection against dust: the enclosure is completely dust tight.
- Protection against water jets: water projected in powerful jets (12.5 mm nozzle) against the enclosure from any direction has no harmful effect.

Cooling method (IC411)

- Frame surface cooled: The primary coolant is circulated in a closed circuit in the motor and gives its heat through the external surface of the motor (in addition to the heat transfer via the stator core and other heat conducting parts) to the final coolant which is the surrounding medium. The surface may be plain or ribbed, with or without an outer shell to improve the heat transfer.
- Self circulation: The coolant is moved dependent on the rotational speed of the main motor either by action of the rotor alone or by means of a component designed for this purpose and mounted directly on the rotor of the main motor, or by a fan or pump unit mechanically driven by the rotor or the main motor.

¹⁾ With oil circulation as standard.

²⁾ With oil circulation as standard for 4 poles.

Note: Axial float of rotor ±8 mm as standard.

Note: The bearing cannot withstand continuous axial forces.

Modular slip-ring motors, type NMK

Availability for heavy load inertia applications

Slip-ring motors are an ideal solution for applications which require high starting torque and low starting current. They are especially suitable for heavy load inertia applications like mill drives or situations where network conditions are weak.

ABB's slip-ring motors minimize mechanical stress at starting, increasing the lifetime of your driven equipment. They provide maximized availability and high torque over the entire speed range.

Slip-ring motors are widely used in mills, crushers, fans, and conveyors in the mining, cement and metal industries. In addition, these motors offer a reliable solution for pumps in the water industry and safe area pumps, compressors and mixers in the petrochemical industry.

NMK slip ring motors are available in shaft heights from 400 to 710 mm, with cooling methods and protection types of IC611/IP55, IC81W/IP55 as standard. The motors are rated up to 10,000 kW.

NMK motors have a welded steel frame. Slip ring unit can be supplied with permanent contact brushes, or with brush lifting gear. In both cases the slip rings are enclosed in a housing located at the N-end and separated from the main motor frame. Liquid resistance starter(LRS) is available on request.

For NMK motors this catalog only shows the typical technical data of 6kV and 11kV at 50 Hz for 4, 6, and 8 pole motors. While the complete product scope covers motors with 60Hz, pole numbers up to 16, and voltage rating up to 13.8kV.

For more detailed technical data and configuration solutions on NMK slip-ring motors, please contact ABB.

Modular slip-ring motors, type NMK

Mounting arrangements

Standard mounting arrangements for NMK motors. Other mountings e.g. IM1002 available on request.

Code I: IM B3
Code II: IM 1001
Horizontal foot mounted

Modular slip-ring motors, type NMK

Enclosure and cooling

Standard combinations for NMK motors are IC611/IP55 and IC81W/IP55, other cooling methods of IC616, IC86W, etc. available on request.

—
30
IC611/IP55

IC611/IP55

This design has an air-to-air heat exchanger mounted on the motor, which is fully enclosed. Shaft mounted fans are fitted both inside motor frame and inside slip ring housing, and outside of the casing to supply the inside and outside cooling circuits respectively. The motor is protected against dust and splashing water from any direction.

—
31
IC81W/IP55

IC81W/IP55

The machine is totally enclosed having a machine-mounted and a SRU housing mounted air-to-water heat exchangers. A shaft mounted fan is fitted inside the casing to supply the internal cooling circuit. The motor is protected against dust and splashing water from any direction. a component designed for this purpose and mounted directly on the rotor of the main motor, or by a fan or pump unit mechanically driven by the rotor or the main motor.

Modular slip-ring motors, type NMK

Type designation

The type designation of the NMK motors follows the coding principle shown below.
Example: NMK 450L4A BALS

1	NM	New Alternating Current Machines
2	K	Indicates the type of motor, I = SCIM, K = WRIM
3	450	Shaft centre height in mm, 400, 450, 500, 560, 630, 710
4	L	Frame length, S = small, M = medium, L = long
5	4	Number of poles
6	A	Stands for the IC/IP combination; A = IC611 / IC616 / IC666 / IP55 [TEAAC] air-to-air cooled L = IC81W / IC86W / IP55 [TEWAC] air-to-water cooled
7	B	Mounting arrangement, B = IM1001 (horizontal)
8	A	Bearing type, A = antifriction, S = sleeve
9	L	Indication of special construction (1 or more digits, not obligatory) L = Brush lifting device (BLD) X = electrically special T = separate ventilation Y = mechanically special
10	S	Location of manufacture S = Shanghai (China) H = Helsinki (Finland) I = India (Vadodara)

Note: Preliminary dimensions of standard configuration in the list.

Note: Optional solutions e.g. NEMA oversize main terminal box, IM 1002, sleeve bearings, with BLD, etc. on request.

Note: Sleeve bearings with oil circulation are default for 4 pole machines on frame size 710mm.

Note: Accurate dimension drawing will be given on customized solution at the quotation phase.

Table gives main dimensions in mm.

Total product offering

ABB offers a wide range of motors, generators and mechanical power transmission products with a complete portfolio of services.

IEC motors

- Low voltage motors
- High voltage induction motors
- Synchronous motors
- Marine motors
- Motors for explosive atmospheres
- Motors for food and beverage
- Motors for variable speed drives
- Permanent magnet motors
- Synchronous reluctance motors
- Traction motors

NEMA motors

- Low voltage motors
- High voltage induction motors
- Synchronous motors
- Marine motors
- Motors for explosive atmospheres
- Motors for variable speed drives
- Permanent magnet motors
- Servomotors
- Washdown motors

Generators

- Generators for wind turbines
- Generators for diesel and gas engine power plants
- Generators for steam and gas turbine power plants
- Generators for marine applications
- Generators for industrial applications
- Generators for traction applications

Synchronous condensers

Mechanical power transmission components, bearings, gearings

- Mounted bearings
- Enclosed gearing
- Couplings
- Conveyor components
- Geared motor units

Life cycle services and support

Life cycle services and support

From pre-purchase to migration and upgrades

ABB offers a complete portfolio of services to ensure trouble-free operation and long product lifetimes. These services cover the entire life cycle. Local support is provided through a global network of ABB service centers and certified partners.

Pre-purchase

ABB's front-end sales organization can help customers to quickly and efficiently select, configure and optimize the right motor for their application.

Installation and commissioning

Professional installation and commissioning by ABB's certified engineers represent an investment in availability and reliability over the entire life cycle.

Engineering and consulting

ABB's experts provide energy efficiency and reliability appraisals, advanced condition and performance assessments and technical studies.

Condition Monitoring and Diagnosis

Unique services provide early warnings before failures occur. Data can be collected by an engineer on-site or by remote monitoring. With the ABB Ability™ platform data can be transmitted to the cloud and accessed and analyzed remotely, allowing even greater insight into the health of the equipment. The services focus on the bearings, rotor winding, stator winding insulation and overall mechanical condition.

Maintenance and field services

ABB offers life cycle management plans and preventive maintenance products. The recommended four-level maintenance program covers the entire product lifetime.

Spare parts

Spare parts and support are offered throughout the life cycle of ABB products. In addition to individual spares, tailored spare part packages are also available.

Repair and refurbishment

Support for all ABB generators and other brands is provided by ABB's global service organization. Specialist teams can also deliver emergency support.

Migration and upgrades

Life cycle audits determine the optimum upgrades and migration paths. Upgrades range from individual components to direct replacement motors.

Training

Product and service training courses take a practical approach. The training ranges from standard courses to specially tailored programs to suit customer requirements.

Specialized support

Specialized support is offered through ABB's global service organization. Local units provide major and minor repairs as well as overhauls and reconditioning.

Service contracts

Service contracts are tailored to the customer's needs. The contracts combine ABB's entire service portfolio and 120 years of experience to deploy the optimal service practices.

Additional information

We reserve the right to make technical changes or modify the contents of this document without prior notice. With regard to purchase orders, the agreed particulars shall prevail.
